CLAUDE CODE FOR PMS · YOUR PROJECT REPO

Everything you build lives in one repo

Create it once from the course template. Rook Industries comes with it, under `00-rook/`, and each of the six modules saves the prompts you wrote yourself into its own folder. The repo is your final project.

📂 Use this template →

Opens GitHub's "Create a new repository" with `claude-code-for-pms-template` preselected. Name it `claude-code-for-pms-final`, leave Include all branches off, skip the description, and leave visibility on the default, Public, meaning anyone with the link could see your work; switch it to Private later in Settings if you would rather. You can also browse the template first.

STEP 1

Create your repo

Click **Use this template → Create a new repository** above, or the same button in your Final Project Brief. Name it `claude-code-for-pms-final` and keep it **private**.

STEP 2

Open it in Claude

Open your new repo's folder in the Claude desktop app as your project. You point Claude Code at this same folder in all six sessions. No terminal, and nothing to install with a command.

STEP 3

Commit what Claude writes

At the end of each day, type wrap up. Claude saves that day's files to your repo for the next day. The repo URL is the deliverable.

Repo structure

What you get the moment you create it

JUMP TO 01-origin-story 02-super-hearing 03-rewind 04-x-ray-vision 05-super-speed 06-sidekicks

```
CLAUDE.md                    ← your working file, built in module 1
00-rook/                     ← routing code, plus one Word doc
  ├── company/notes/handoff-from-priya.docx  ← the one Word doc still in the repo
  └── code/dispatch-routing/  ← the routing code
.mcp.json                    ← rook-wiki and rook-database, read only
01-origin-story/             ← M1 · prompts.md
02-super-hearing/            ← M2 · prompts.md
03-rewind/                   ← M3 · prompts.md
04-x-ray-vision/             ← M4 · prompts.md
05-super-speed/              ← M5 · prompts.md
06-sidekicks/                ← M6 · prompts.md
```

MODULE 1 · ORIGIN STORY

01-origin-story/

Onboard Claude to Your Product

How to have Claude Code persistently know you.

> **Build a context file**
> You're going to give Claude everything Rook knows about itself, and then ask it something you couldn't have asked before.

The closing prompt pushes `01-origin-story/prompts.md` to GitHub for you before you close the session.

MODULE 2 · SUPER-HEARING

02-super-hearing/

Listen to Customers at Scale

Read a hundred things at once, understand them, and find where they disagree.

> **Lab A: Point Claude at the Interviews**
> Three steps: point Claude at a room full of interviews, push past what's obvious, then commit to a read of your own.

> **Lab B: Point Claude at the Tickets**
> Same technique, a very different pile: point Claude at the tickets, push past the obvious, then flag what changed after the date that matters.

> **Lab C: Point Claude at Both Piles**
> Three steps: bring the two reads together, push it further, then check it against what you posted in Lab A.

The closing prompt pushes `02-super-hearing/prompts.md` to GitHub for you before you close the session.

MODULE 3 · REWIND

03-rewind/

Verify Your Product Metrics

Ask the data directly, then check whether the answer is credible.

> **Lab A: What Happened After Release 4.2**
> Three steps: ask the pings table, push past the first answer, then post the number you'd actually defend.

> **Lab B: Does the Story Hold Up?**
> Two steps: put the two sources side by side, then check the most confident thing anyone's told you.

> **Lab C: One Person's Story**
> Three steps: pick someone, follow their month, then say it in plain English.

The closing prompt pushes `03-rewind/prompts.md` to GitHub for you before you close the session.

MODULE 4 · X-RAY VISION

04-x-ray-vision/

Inspect Codebases Without Coding

Debug the code without coding.

> **Lab A: A First Look at 4.2's Code**

> Three steps: point Claude at code you've never opened, push past the first explanation, then post a read you can defend twenty minutes in.

> **Lab B: Check It Against What You Know**
> Three steps: a question that's been sitting on the 4.2 release page for a week, a prompt you write yourself to test it, then the answer the engineering manager never got.

> **Lab C: What the Code Doesn't Do**
> Three steps: find what takes points off, push it further, then say it plainly.

The closing prompt pushes `04-x-ray-vision/prompts.md` to GitHub for you before you close the session.

MODULE 5 · SUPER-SPEED

05-super-speed/

Turn Descriptions Into Prototypes

If you can describe it, Claude Code can build it.

> **Lab A: Draft a Brief for the Director**
> Three steps: point Claude at the wiki and one Word doc, push on the brief until it holds up, then save it before you build.

> **Lab B: Build What You Briefed**
> Three steps: turn the brief into something clickable, push it further, then show a partner.

> **Also lands here**
> Your one-page brief, and the single-file prototype you can click through.

The closing prompt pushes `05-super-speed/prompts.md` to GitHub for you before you close the session.

MODULE 6 · SIDEKICKS

06-sidekicks/

Automate Your Product Workflows

Write it down once, and let it run again, or without you.

> **Skill Lab**
> Three steps: build and refine the skill, swap and run it on your partner's brief, then put it on a schedule.

> **Also lands here**
>
> `review-checklist` , the skill you write once and run twice.

The closing prompt pushes `06-sidekicks/prompts.md` to GitHub for you before you close the session.

Everything about Rook Industries in this repo is a fictional teaching scenario. The session-scope block at the top of `CLAUDE.md` keeps your course work inside this folder, so leave those lines in place. Full grading and submission detail is in your Final Project Brief.
