MODULE 2 · GLOSSARY

Module 2, Glossary

*Listen to Customers at Scale** · superpower: “Super-Hearing”*

Claude Code for PMs · Glossary · Module 2

Read a hundred things at once, understand them, and find where they disagree

Words from this module

- **Transcript**: A recorded conversation, written down. Four of them sit in `rook-wiki: Customer interviews`.
- **Support ticket**: A written report from somebody using the product. 147 sit in the rook-database table `support_tickets` (107 filed on or after 12 August).

Rook vocabulary

Several of these mean something specific at Rook and something looser everywhere else. Source: the Glossary page on the rook-wiki connector.

- **Responder**: An individual who accepts callouts and goes to incidents. Not a Rook employee, independently operating.
- **Handler**: The person responsible for a specific responder or small group of them. Usually who is actually clicking around in the product.
- **Callout**: A request for a responder to attend an incident. The unit of work in Dispatch.
- **Callout offer**: A specific callout presented to a specific responder on their mobile device, awaiting an accept or a decline.
- **Callout timeout**: How long an offer stays live before it expires and moves to the next responder. Set in the release, the same for everyone.
- **Ping**: The everyday word for a callout offer arriving on somebody's phone.
- **Decline**: A responder actively refusing an offer. Distinct from a timeout in the data, though both send the callout onward.
- **Acceptance rate**: Share of callout offers accepted rather than declined or timed out. Dispatch's headline metric.
- **Routing priority**: The score Dispatch uses to rank available responders for a callout. Declining or timing out lowers the recent-acceptance component, which lowers priority for subsequent callouts.
- **Capability tag**: A labeled competency on a responder record, matched against what an incident requires.

- **Coverage gap**: An incident where no available responder carried the required capability tags. A gap means nobody could have gone, not that nobody would.
